The League of the Rebellion.

The ways of Providence are sometimes mysterious in what does not happen as well as in the events that do transpire. While it is true that the expression of negative qualities is generally a mathematical process we habitually argue without positive data before us upon ordinary topics. An example or two will prove this. A farmer trusting to the absence of certain conditions which have in the course of his experience hindered the realization of particular esults, plants, and if there is no recurrence of the unfavorable circumstances, obtains an abundant yield. A merchant familiar with the laws of trade sees a change in the season, prepares his stock accordingly, and profits thereby, if the weather is suited to his enterprise. Happily, in these and all other cases not proceeding upon demonstration, the possibilities of success diminish the certainty of calculation and success. The same process of reasoning might be applied to political affairs, and it has in fact been employed by the rebel leaders. They had been familiar for a long time with the practical operations of the Government, were well acquainted with the geography of the country, but more particularly with their own section and with the products of their own states; they contrasted the constitutions and laws with the mode of administering government in other lands; they thought they knew the extent of their own resources, and having formed the notion that there was no real strength abiding in our political system, or that whatever strength there might be, could never be employed against them, undertook to overthrow the existing government and to establish a new one, the assumed weakness of the old government was the negative quantity upon which they based their reasoning, and led on by their impulses they proceeded to establish their political organization with the same confidence that a mathematician would work out the unerring results of an equation. But that in this instance the argument was fallacious, or if not fallacious, that Providence was against them, is evident by their utter failure. Besides this, keeping in view their confident assumption that Providence approved of their course and that the scriptures authorized the continuance of their peculiar system, how can they account for their discomfiture? Some Southern writers have denounced Davis as the cause of their defeat, and think the Confederacy would have fared well had he been neither in the chair of State. I do not believe it been on that account if their system was a just one, it seems to be hardly within the limits of the remotest probability that the Divine Being would have suffered his law to be defeated, in the overthrow of their cause, merely because a certain individual, in whose private character nothing was alleged, directed the affairs of Government. If the human intellect ever was at fault, it was at fault in this revolt. The Confederacy was not established, and we think we are in the hand of the good Father. This is the chief of all we behold in this world, and no man

A Marseilles, France, newspaper says the biographies of that city have struck over sixteen thousand of them assembled in mass convention, and resolved not to ask any young woman in marriage until the women practice greater economy in dress.

CLOTH AND ITS COTTONS—A New York house, John Durand & Co., have projected a work of great value and interest, connected with our national affairs. It is proposed to issue a large volume of biographies of our leading military and naval heroes, statesmen, diplomats, and other public characters with historical portraits. This work is to be interspersed with the histories of many of the leading cities of the country, which will greatly enhance its value. It is intended to distribute at least ten thousand copies gratuitously, and there can be but little doubt but that the enterprise will prove a very successful one.

—France is suffering from an invasion of caterpillars, which have been very destructive this year to the forests, especially those in the neighborhood of Paris, while the beautiful walks of the Champs Elysees are full of them.

—The scheme for erecting a central hall of arts and sciences in memory of Prince Albert is progressing. The Prince of Wales presided over a meeting of the promoters on the 6th instant.

We have just added to our extensive Grocery House a Liquor Department for the accommodation of our customers, where they can rely upon getting a good article, and upon what they purchase can save 20 per cent. **HAIGHT, HUTCHINGS & CO.**, Spring and Diamond Streets, Clark's Block, opposite Crittenden Hall, April 1st.

The Little Rock Journal holds out strong inducements to emigrate to North western Arkansas, and dilates with great enthusiasm upon its soil and timber, its mines of lead, iron, silver, saltpetre and coal, to say nothing of the invaluable salutary of its climate and the purity of its water.

—An amount \$50,000 worth of defaced or worn out fractional currency is destroyed every day, and its place supplied with new. The entire amount now in circulation is upwards of \$21,000. No more three cent notes are to be issued, an act of Congress prohibiting them, and the five cent notes will gradually be withdrawn.

The English sparrow which have been introduced into Jersey City have cleaned the trees entirely of worms. A pair will destroy six hundred caterpillars daily in feeding their young. The robin of this country is equally as good a tree verminator, and ought not to be killed by sportsmen. They are now found in the public squares of Philadelphia doing the work of extermination.

—One of the few who have made a serious study of Paris has made a curious prediction in regard to this. After a series of experiments he announces that he can cause the country from its birth to decay—destroying organs to be the only means to save the ground.

—The streets of Paris have made a curious revolution in regard to trees. After a
